Team Name: EIS Girls Team/The Really Super Duper Awesome Team
Team Number - 832
Region - San Diego

Period 3 Lessons Learned

Experienced Gained
We have gained skills like learning how to code and code specific parts. We learned that asking for help is important and teamwork is important. We learned how to problem solve and put things together. Also, I learned how to build and help with the robots.
- I learned how to problem solve and put things together
- Team building/teamwork

Documentation Process
The documentation process is first writing our goals for certain categories, moving onto our name, lastly writing down the dates. When we did the video and document it was a bit hard since we didn't know what to do. It was helpful, helped us plan

Surprises
A surprise was building <u>two</u> robots because I am new to the team. I had mostly no experience so it was harder than I thought. One thing that surprised me is that something on the table is a baby toy! Servos not working

Advice For Future Teams
Advice I have for future teams is that in order to succeed you have to believe in yourself no matter how hard it is. Always follow directions and experiment things, help others, be creative. Always plan first!
